

October 15, 1956

Hi Aaron---

I'm flying through Chicago Thursday A.M. & will have a 90-minute layover (about 10:15 to 11:45 AM CDT) at Midway airport. This is to warn you at least to expect a phone call; if you had the time, car and something on your mind, I'd love to see you there, but it's my turn to return the favor & don't go out of your way. I do ~~you~~ hope you're looking more congenially at Wisconsin's chase after you, and hope I'm not leaving out any argument that you would want to have for making up your mind.

Jim tells me you'll be up here in December-- let us know in advance so we can pick you up.

Protoplasts are turning into L-forms, but not much else new. I never have seen your kinetic writeup: is it lost?

~~XXXXXXXXXXXXXXXXXXXX~~

We have a large bunch of Lac⁻ stocks now that Newton Morton has been clearing up, including a fair set in the Lac₁ cistron-- if anything along this line interests you, let me know.

Say hello to Jane for us,

Yours sincerely,

Joshua Lederberg
